

High Clouds

The high clouds can have a height from 5km up to 13km.

The high clouds names are:

- Cirrus
- Cirrocumulus
- Cirrostratus

Cirrus

Cirrus clouds are thin and long clouds.

They are commonly called "mare's tail" because they are shaped like the tail of a horse.

They are often seen during fair weather.

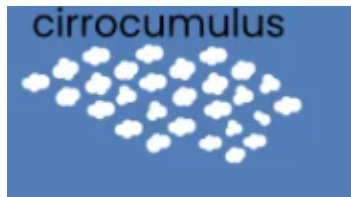

Cirrocumulus

Cirrocumulus are very small, white rounded clouds.

They are usually white but can be grey.

They are common in winter.

Cirrostratus

Cirrostratus are very thin.

Sun or moon can shine through it.

They come usually 12h or 24h before rain or snowstorm.
